

Genuine KAM Snaps

W_GE-KAM-T3-T5-50-P

Ring round the outside

Ring on the inside

Caps

Please note these images have been highly edited in colour to try and make them as clear as possible.

With KAM snaps, you do not need to cut a hole as it is likely you are using a stretchy material. A cut hole would further stretch and grow, making your snap less secure.

Instead of cutting a hole, you should simply pierce the cap through the fabric.

Plastic Snap Poppers Die Set

Search: KAM-DIE-T3-G

Make sure you get the die in the same size as your hardware. The part with the outside ring will fit onto the top die with the raised ring and the part with the inside ring will fit into the top die with the concaved circle (If you can't work it out by looking at it then just try them both until they fit on). The base die will remain the same to hold the cap and then switch out the top die to complete.
