

Eyelets

W_EY-BRS-100-P

We measure our Eyelets by the size of the **HOLE**, not the overall diameter.

The overall diameter is likely to be around 2-12mm larger than the hole, depending on how big you go.

You need your hole cutter to match the size of your Eyelets. If you buy 8mm Eyelets then you will need the 8mm hole cutter! Larger holes will require more force to cut. Try placing some corrugated cardboard under your fabric to give the hole cutter something to bite into.

Hole Cutting Die

Eyelet Die Set

Search: W_EY-DIE-G-P

You will need the matching Eyelet Die Set, **ALSO** in the same size. In this example, you already have the 8mm Eyelets, the 8mm hole cutter and now you need the 8mm Eyelet Die Set! Place the barrel face down onto the bottom die, lay your fabric on top and place the washer on top with the ridge facing up!
