

# Hole Cutter Guide

For anything with a post: Rivets, Press Studs, Magnetic Clasps etc, we always recommend a 3mm hole cutter. This is for the post to go through and the size of the cap has no impact on this.

## 3mm Hole Cutting Die

Search:

HC-DIE-GLD-3MM-G

When fitting Eyelets, you will need a hole cutter of the size of eyelets. At Trimming Shop, we measure our eyelets by the size of the **HOLE** not the overall diameter.

So... If you are using 8mm Trimming Shop Eyelets, then you will need the 8mm hole cutting die (as well as the 8mm Eyelet Die Set).

## Top Tip:

We recommend placing some corrugated cardboard under your material when using the hole cutter. This prevents the hole cutter from chipping/shattering. The hole cutter is a product that you may need to replace at some point but by using this hack it will increase it's longevity!

The larger the hole you are cutting, the more pressure is needed to cut the fabric. Please note that you don't need to slam the GM handle down, slowly lower it until you reach the fabric and firmly push down :)
